

ACCESS SWING

SEAT

Ref. 1963

ROPE ACCESS, TREE CLIMBING

A lightweight, rigid aluminum alloy seat with plush padding for prolonged suspension work.

Designed to integrate seamlessly with all GT, Access and Tree Access series harnesses using buckles. Can also be connected to any EN 813 harness by connecting it to the front attachment point with two connectors (we suggest the C.A.M.P. Nano 22 ref.2335).

Equipped with buckle for connection to the back of compatible harnesses when not in use.

Patented "Sicura" buckles conceived to be connected directly to the buckles on the harnesses: Access Sit, GT Sit, Tree Access Evo, GT Turbo and GT ANSI.

Side gear loops, 10 Kg max

Aluminium alloy structure for best stiffness during suspension. Double layer padding made by foam covered by breathable 3D mesh

Webbing loops for the connection of the seat to the ventral attachment ring of any EN813 harness by means of two connectors (suggested "Nano 22" ref.2335)

Aluminium alloy hook for fastening the seat on the back of "Access Sit", when not in use
